

## TRENDFILM 7500 Cast Vinyl

September 2024

Designed for applications over complex curves like rivets, corrugations and other irregular surfaces.

The face is a 2.0-mil cadmium-free cast vinyl, durable and highly flexible for conformability over difficult surfaces with a high gloss finish and designed for superior cutting and weed ability. The product is coated with a high performance, permanent, clear solvent acrylic adhesive protected with 78# bleached white kraft liner as standard or a 90# Polycoated liner for sheeting.

The films exhibit excellent dimensional stability in high performance permanent marking applications that require up to 8 years outdoor durability.

### Applications

- Fleet marking
- Container decals
- Marine
- Recreational vehicle
- Signs and Logos
- Automotive and Striping
- Equipment identification
- Architectural signage

### Specifications

Black, White and Solid colors will last 8 years. This use-life estimate is based upon accelerated age studies based on vertical applications under "normal" temperate climates. Exposure to severe temperatures, ultra-violet light and tropical, sub-tropical or desert regions will cause more rapid deterioration. This also applies to polluted areas, high altitude and south facing exposure.

SHELF LIFE: 2 YEARS (stored at 60-80 degrees)

GASOLINE RESISTANCE: Low and high octane gasoline test 'good'  
sprayed several times with gasoline followed by drying at each stage
